

ABSTRACT OF THE DISCLOSURE

Each controlled device holds a remote control panel optimum for its operation environment. A control device has a remote controller unit for operating the remote control panel of each controlled device. Each controlled device reconstructs the remote control panel according to the shape etc. of the remote controller unit, and supplies the control device with thus reconstructed remote control panel. The user remote controls the desired controlled device, utilizing the remote control panel displayed on the control device.

Thus there can be realized a simple and easily understandable operation environment, which matches the controlled device connected to the network.
